

Patient Engagement

Elation engages and empowers your patients, helping you deliver exceptional care

Our core EHR features and secure patient portal help keep patients healthy before, during, and in-between visits.

Engaged patients, better outcomes, and lower costs

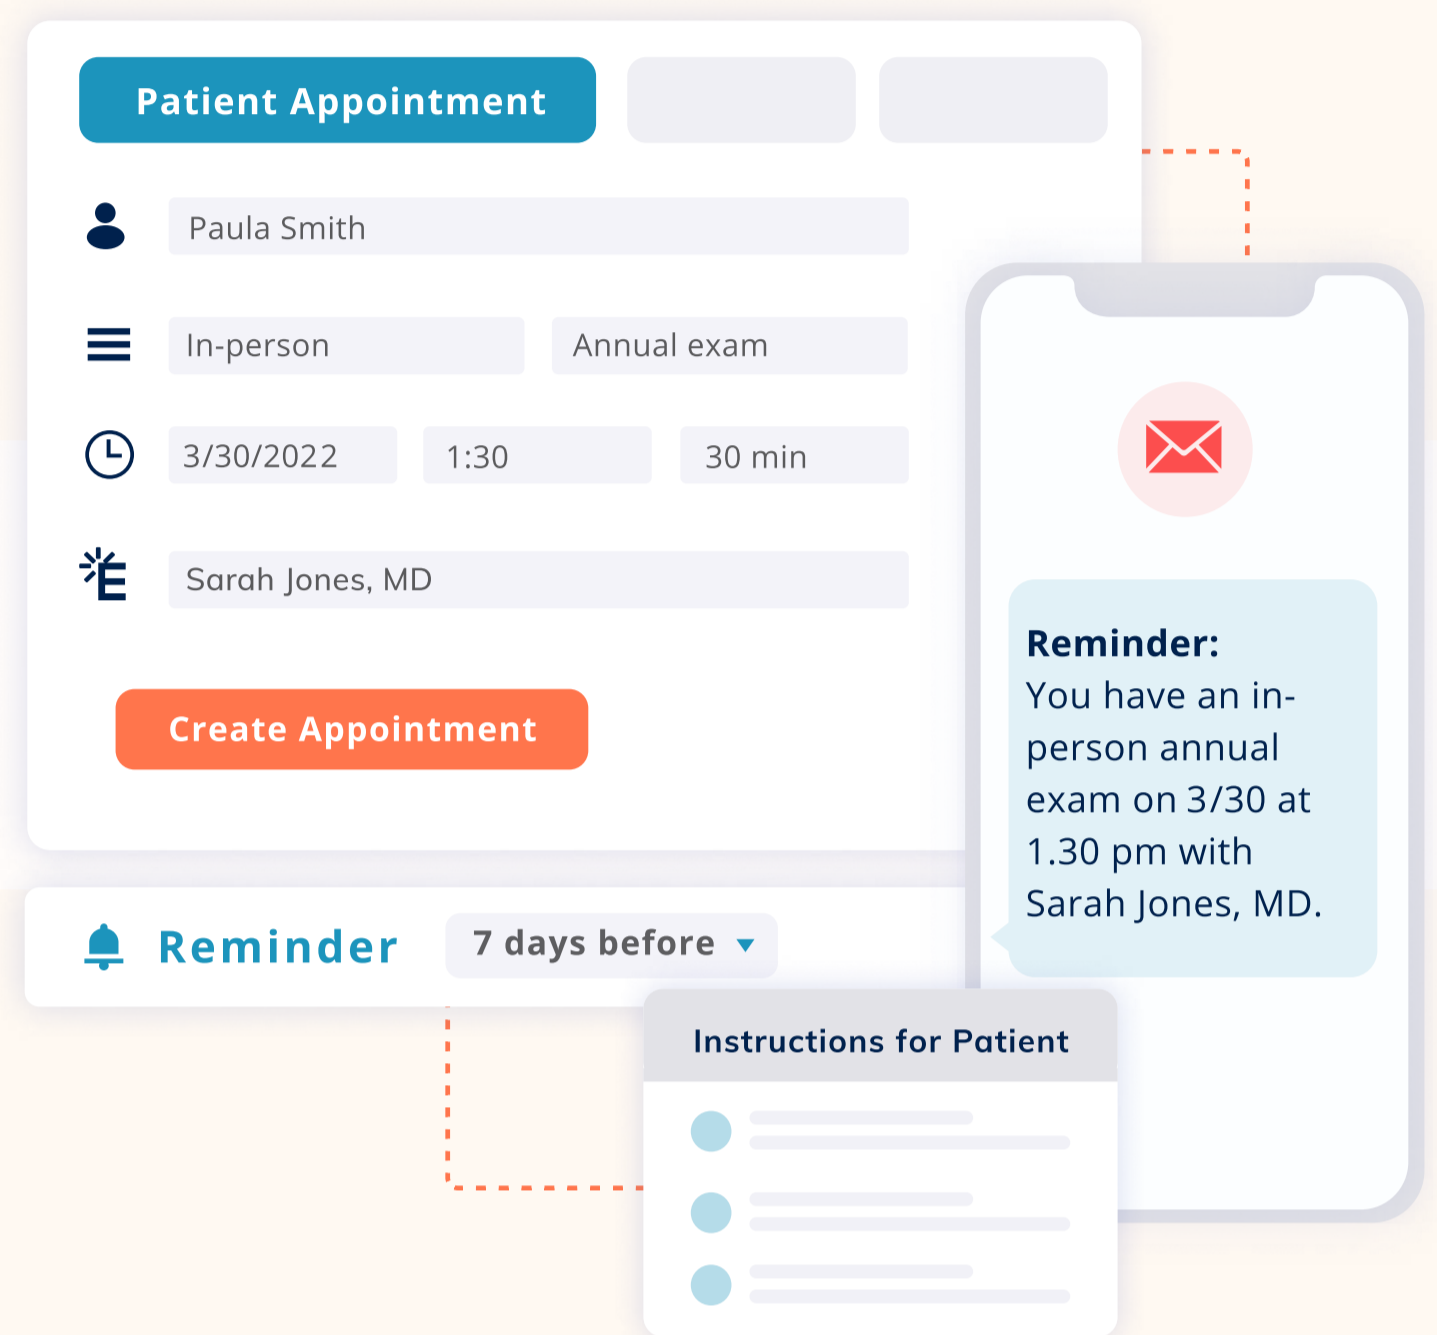

Patients actively engage in their healthcare journey, using the Passport web or mobile app to schedule appointments, share health history and data, review results, and communicate with their doctor, leading to lower healthcare costs.

Strengthened patient-provider relationships

Passport and other Elation tools expand the scope of the provider-patient relationship, allowing patients to stay connected with their doctor in-between visits and adhere to their care plans.

Saved time with added convenience

Practices save time and increase productivity when their patients use Passport and other Elation features like online appointment scheduling, intake forms and payments, as well as text or email notifications and reminders. Patients also enjoy the convenience of self-service, online tools.

Satisfied patients	Improved efficiency	Patient-centric experience
Patients appreciate technology that helps them manage their own healthcare needs.	Our online patient engagement tools replace manual and paper-based processes, helping reduce administrative burden.	Our flexible, convenient, and intuitive patient engagement suite involves patients in all aspects of their care.
